

WHY\_2017(2023) - Whatever It Takes -  
for  
**THE WORLD CALENDAR**  
?

Current Gregorian calendar years **2016** and **2022** end on Saturday.  
The World Calendar always begins on Sunday.

For calendar reform to succeed, the replacement should  
1) transition with the least possible disruption,  
2) be simpler to use and  
3) fix the most disruptive problem(s).

The World Calendar will become the world's next main calendar  
after enough people memorize it and personally understand the  
advantages of a 12-month memorizable calendar.

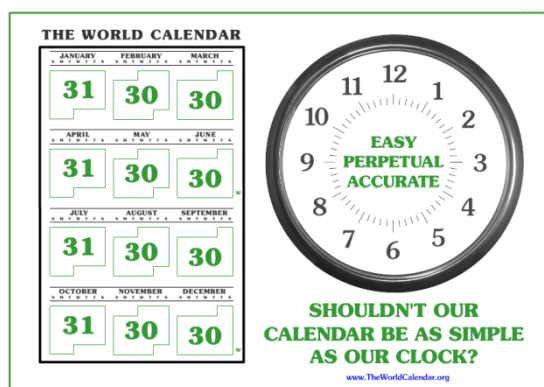

The timing of TWC implementation is a function of 'enough'  
people. 'Enough' will be recognizable by results.

\* Current Gregorian calendar years **2016** and **2022** end on Saturday. TWC always begins on Sunday.
